Profile

Enthusiastic and forward-thinking Computer Science undergraduate specializing in Artificial Intelligence (CGPA: **9.26**), driven by a deep curiosity for emerging technologies and cutting-edge intelligent systems. Passionate about exploring the frontiers of machine learning, natural language processing, agentic workflows, and cloud-native application development. Backed by hands-on experience in building scalable server-side systems, RAG pipelines, and secure automated web platforms, eager to tackle complex technical challenges and continuously learn at the intersection of AI and software engineering.

Education

Bachelors of Technology, *MIT Arts Design and Technology, School of Computing (CGPA-9.26)* 2023 – 2027

XII, *The Orbis School, CBSE (88.4%)* 2022 – 2023

X, *The Orbis School, CBSE (92.4%)* 2020 – 2021

Certificates

AWS Certified AI Practitioner

AWS Certified Cloud Practitioner

MLOps Tools: MLFlow and Hugging Face — Duke University | Coursera

Experience

Backend Intern, *Hapticware Intelligence Pvt Ltd* 06/2026 – Present

- Develop and maintain scalable server-side applications, contributing to end-to-end feature development across backend services and API layers.
- Design and optimize RESTful APIs with a focus on **response time, database performance, and service reliability**, identifying and resolving backend performance bottlenecks.
- Contribute to **system architecture and production debugging**, using AI-assisted development workflows to investigate issues, evaluate implementation approaches, and deploy backend services.
- Own features through implementation, testing, and deployment, developing **unit and integration tests** to validate functionality and improve software reliability.

AI-ML Virtual Internship, *Google for developers & AICTE* 04/2025 – 06/2025

- Implemented model training, data preprocessing, and performance evaluation using TensorFlow and Keras.
- Built a supervised machine learning classification model to solve real-world predictive analysis challenges.

Projects

AI-Powered Personalized Learning Path Generator, *RAG, Knowledge Graphs, ChromaDB, Neo4j, FastAPI, PostgreSQL*

- Designed a personalized learning system that ingests heterogeneous educational resources such as syllabi, PPTs, notes, and previous-year questions and organizes them into structured course workspaces.
- Architected a hybrid retrieval framework combining vector search with a Neo4j knowledge graph to represent concept dependencies and support context-aware retrieval.
- Developed the backend architecture using FastAPI, PostgreSQL, ChromaDB, and Neo4j, with the system designed to identify concept gaps and generate dependency-aware learning paths based on student mastery.

Vaani, *React, Vite, Node.js, Express, SQLite, Claude API, Web Speech API*

- Architected a voice-to-website platform that transforms spoken merchant descriptions into live, mobile-first storefronts with instant product catalogs, real-time "Open Now" states, and WhatsApp ordering integrations.
- Implemented a dual-parsing engine leveraging Claude AI with structured Zod outputs and a robust deterministic offline rule-based fallback, supported by a hash-secured admin dashboard and automated test suite.

SCrow, *Python, FastAPI, LangGraph, React, PayPal REST APIs, Docker*

- Engineered an autonomous agent-to-agent payment and escrow middleware utilizing LangGraph state machines and deterministic financial guardrails to securely manage multi-party transactions.
- Integrated PayPal REST APIs (Orders/Payments v2) for conditional authorization, milestone-based fund capture, and real-time cryptographic verification with an AG Grid control room.

Intelligent Order Management System, *Model Context Protocol, REST APIs,React, Node.js, MYSQL*

- Developed an NLP-driven middleware utilizing LangChain to translate natural language queries into optimized SQL execution plans.
- Engineered robust, fault-tolerant backend workflows with comprehensive unit and integration testing to ensure zero-downtime API execution.
- Utilized advanced AI evaluation tools (LangSmith, LMStudio) to debug LLM latency, reducing prompt hallucination and improving query accuracy.

Technical Skills

Programming
C++, Java, Python, HTML, CSS, JavaScript

Frameworks
React, Node.js, Tensorflow, Flask, LangChain, LangGraph, OpenCV, SpringBoot,OpenCV, LLM APIs, RAG

Fundamentals
Operating System, Data Structures and Algorithms, AWS Cloud Computing, Object Oriented Design, Software Engineering

Tools
VS Code, Git/GitHub, Postman, Google Colab, IntelliJ, LangSmith, LMStudio, Pino Logger

Databases
RDBMS(MySQL, PostgreSQL), NoSQL(MongoDB), ChromaDB
